

John Steenhuisen

2019-11-14

Dear Mr Steenhuisen

The IPTS has been not only the core of high corruption in NMB but also a technical failure

On a micro scale it is another SOE that has failed in its intention, eating money while not delivering results. Yet people inside keep driving it, for various purposes much of it to their own benefit

Regardless of the success of BRT in other centers, experts warn that BRT / IPTS / etc by whatever name, has to be done correctly if it was to work, which was not the case in NMB.

12 years later Treasury who have recklessly fed the hungry animal, is ultimately getting the message, except I believe they still dont know just what to do about it

I have campaigned against the NMB version since its inception. For your information I pass to you my version of the history of this project, and urge you to let this influence the DA's attitude towards it . This was published verbatim in the Weekend Post of 2019-11-09

I have disagreed with DA local policy supporting this since the beginning and tried hard on many occasions to warn them. I reluctantly took a crack at Mr Trollip in my statement, but it has to be seen for what it is

Trusting you will take up my point of view on this in your present campaign to get the mess in NMB sorted out

If I can help in any way, let me know

Kind regards and best wishes
